

# COPD Patient Freed from Coughing Spells and Medicine

For years, Jonna Nielsen suffered from severe coughing spells caused by COPD.

After starting to use Jimco air purifiers, she is now free of coughing and can do without inhaled medication.

Ms Jonna Nielsen has smoked most of her life – and continues to do so though diagnosed with COPD years ago. The 48-year-old Danish single mother still wants to stop smoking but no longer thinks of herself as a COPD patient, while the severe coughing spells and derived muscle pain have gradually disappeared in the course of six months. The turning point was a visit to the hairdresser.

– My hairdresser uses an air purifier to prevent the harsh hair products from causing a bad indoor climate in the salon. According to her, the same type of machine has helped others with breathing problems as well as asthmatic and allergic reactions, and she believed that the air purifier would also be able to help me, says Jonna Nielsen. However, she was initially sceptical. – I could not believe that the small device could be so useful, recalls the Dane, who nevertheless purchased two Jimco MAC 500 air purifiers that are about the size of a shoebox. – It was mainly because I hoped they would make a difference for my children, who were exposed to poor indoor air quality due to smoking and mould in the home.

## Coughing Spells at Home, Never Again

After obtaining the air purifiers, Jonna Nielsen quickly noticed an improvement. – The indoor climate was noticeably better. Coughing spells declined in strength and the resulting muscle pain subsided. All in all, I felt much better and got more energy. In the course of six months, the coughing attacks completely ended and it was no longer necessary to use inhaled medication. Practically, I no longer think of myself as a COPD patient, says the Dane who is completely free of medication – except when she is away from home for days.

– When away for several days, it is still necessary to use an inhaler. I get a heavy feeling in the head and I cough, but not as fiercely as before. The problem can be solved by bringing one of my air purifiers.

## Kills Microorganisms and Improves the Indoor Climate

Jonna Nielsen is also pleased that the air purifiers have improved indoor air quality and reduced home smoke pollution. – The air feels more clean and fresh, and we no longer feel a strong smell of smoke when we enter the house or sniff our clothes. In fact, even non-smokers who come to visit cannot smell that I smoke indoors. Most of all it is important that my children are not bothered by smoking in the same way as before, she says.

According to Kirsten Larsen of AIR-TECH, reseller of the Jimco MAC 500 air purifiers in Denmark, the products eliminate bacteria, mould and pollen, thus also preventing infection with, e.g., flu. – The patented technology has received the EU Environmental Award and is used by thousands of individuals, companies and institutions worldwide. In addition to helping people with COPD, breathing problems, asthma and allergies, the air purifiers are also being applied for removing odour nuisances from cooking fumes and wood stoves as well as in holiday homes, caravans and basements, she says.

## Facts about the Jimco MAC 500 Air Purifier

- Relieves breathing difficulties and coughing plus other reactions caused by allergies, asthma and COPD
- Reduces odour nuisances from e.g. smoking, wood stoves, cooking, incontinence and lack of ventilation
- Enhances the indoor climate and prevents infection
